

What is claimed is:

1. An acrylic ester compound represented by the general formula (1):

- 5 wherein, R_1 and R_2 represent independently a hydrogen atom, an alkyl group which may have a substituent, an aromatic alkyl group which may have a substituent or an aromatic residue which may have a substituent, respectively; R_3 represents a hydrogen atom or an alkyl group; A represents a divalent organic group; and
- 10 X represents a sulfur atom or an oxygen atom; provided that when X is an oxygen atom, R_1 represents an aromatic residue that may have a substituent.

2. The acrylic ester compound according to claim 1, wherein in formula (1) R_1 represents an aromatic residue which
- 15 may have a substituent, A represents $-(CH_2)_m-$ (m is an integer from 1 to 3), and X represents a sulfur atom.

- Sub
a2
3. A polymerizable composition comprising the acrylic ester compound according to claim 1 or 2.

4. A cured article obtained by polymerizing the
- 20 polymerizable composition according to claim 3.

5. An optical component comprising the cured article according to claim 4.

- Sub
a3
6. A manufacturing method of the acrylic ester

Sub
C3

compound according to claim 1 or 2, wherein a sulfur-containing compound represented by the general formula (2) is esterified to form an acrylic ester:

5 wherein, R_1 and R_2 represent independently a hydrogen atom, an alkyl group which may have a substituent, an aromatic alkyl group which may have a substituent or an aromatic residue which may have a substituent, respectively; A represents a divalent organic group; and X represents a sulfur atom or an oxygen atom; provided
10 that when X is an oxygen atom, R_1 represents an aromatic residue that may have a substituent.

7. The manufacturing method according to claim 6, wherein in the general formula (2) R_1 represents an aromatic residue which may have a substituent, A represents $-(CH_2)_m-$ (m
15 is an integer from 1 to 3) and X represents a sulfur atom.

8. The manufacturing methods according to claim 6 or 7, wherein esterification to form an acrylic ester is performed by reacting the compound represented by the general formula (2) with halopropionic acids or acid halides thereof to form a
20 halopropionic acid compound and then by dehalogenating the halopropionic acid compound.

9. A sulfur-containing compound represented by the general formula (2):

Sub
C4

(2)

wherein, R_1 and R_2 represent independently a hydrogen atom, an alkyl group which may have a substituent, an aromatic alkyl group which may have a substituent or an aromatic residue which may have a substituent, respectively; A represents a divalent organic group; and X represents a sulfur atom or an oxygen atom; provided that when X is an oxygen atom, R_1 represents an aromatic residue that may have a substituent.

10. The sulfur-containing compound according to claim 9, wherein in the general formula (2) R_1 represents an aromatic residue which may have a substituent, A represents $-(CH_2)_m-$ (m is an integer from 1 to 3) and X represents a sulfur atom.
